

TurboSwing®

DESIGNED FOR YOUR OUTBOARD MOTOR

Whether you have a runabout, a pontoon boat, a fishing boat, or even a small cruiser, if your boat is powered by virtually any outboard—even twin engines all the way up to 350 horsepower—we have a TurboSwing model that will do the trick.

One of the reasons the TurboSwing is so versatile lies in its basic design. TurboSwing attaches to the transom, which is already the strongest part of the boat. The mounting systems piggybacks on motor mount bolts that are already present in the transom, and all that needs to be added is a pair of stabilizing bolts.

- ☑ Tubing
- ☑ Wakeboarding
- ☑ Kneeboarding
- ☑ Water Skiing
